

DJIBOUTI PORT COMMUNITY SYSTEMS IS NOW GOING LIVE

We, Djibouti Port Community System (DPCS), are proud to announce the official launching of our project. DPCS is undoubtedly a service that will benefit all its users. DPCS been spurred by the current lack of IT solutions to coordinate the different processes linked to importing/exporting through the ports, airports, rail and corridor. Its product, the Port Community System aims to leverage technology to simplify, connect and streamline those processes.

A Port Community System is an electronic platform which connects the multiple systems operated by a variety of organizations that make up a seaport, airport or inland port community.

Djibouti Port Community Systems is a subsidiary of Djibouti Ports & Free Zones Authority (DPFZA) through Great Horn Investment Holding (GHIH). DPCS is a portal that provides

a comprehensive set of online services to the trading community. The DPCS aim is to provide a single point of entry for the import/export community to complete all regulatory documentations and increase productivity and efficiency of Sea/Air ports Operations and customs regulatory documentation through the implementation of PCS.

DPCS will offers each of its target groups its own package of tailor-made services. Currently, companies have to organize matters such as pre-reporting a vessel, the status of a shipment, export documentation, loading/unloading papers or communication separately and by e-mail, fax or telephone.

DPCS will eliminate these hectic and lengthy procedures. Everything is now will be merged into a single system and all the request will be done online. This will result in increased efficiency, lower planning costs, better and transparent planning, faster handling and fewer errors.
